REMOTE SITE SAFETY & HAZARD CONTROL

Keeping your rig running productively and safely is of the highest concern to producers in the oil and gas business. Juler Group understands the need to keep your physical and human assets in tip top shape so that production is continuous and under control. To this end, we regularly assess general safety conditions and hazard exposure at the regional field offices, rig sites and mobile units. All phases, from site prep to drilling to completion to maintaining to plug & abandon, have specific safety needs, and the demand for risk control.

Juler Group performs monitoring and analysis without interrupting operations. We hook up our equipment anywhere and at anytime for the convenience of the field service personnel. Our customers, the biggest and best in the business, appreciate our flexibility and most importantly our determination to get the job done with little or no impact to them. Keeping them running risk free is our focus.

Juler Group routinely monitors noise exposures, chemical exposures and hazard exposures in the San Juan Basin, the Western Slope, the Wamsutter Field and the Permian Basin. In key locations such as Farmington, Grand Junction, Vernal, Rock Springs, Casper, Pampa, Denver, Bakersfield, and Oklahoma City we manage health & safety and industrial hygiene programs for the busiest in the oil and gas business. We manage risk control programs.
